

EDITORIAL

Jean Marie MATHELIN

For over 30 years, the GIE Defence NBC has brought together innovative SMEs, subsidiaries of large corporations, and research laboratories, all part of the French CBRN Defense Industry. Together, they contribute to the excellence of operational responses in a domain critical to national sovereignty.

In response to the evolving nature of threats – whether military aggression, terrorism, or industrial accidents – and the changing forms of such threats (nuclear, radiological, biological, or chemical), the GIE Défense NBC remains committed to environmental concerns. Continuously adapting, the group integrates new competencies over time to offer increasingly tailored solutions. With its privileged relationships with French authorities, providing an in-depth understanding of the operational context, and its expertise in the NRBC field, the GIE Défense NBC positions itself as an ambassador of French know-how internationally.

It works to protect the military, security forces, populations, and territories while creating a fertile environment for the export of its member companies' capabilities.

Goals and Strategy

Promote the products and services of member companies on the international stage to foster export growth.

Stngthen and expand partnerships with the French authorities.

Support the development and consolidation of the French CBRN defence industrial and technological base by serving as a neutral platform for collaboration and exchange
